

Smart Scouter

By Dave Ziegler, Jr.

CHECK YOUR SCOUTING PHOTOS ANYTIME, ANYWHERE! Wherever you have Internet access--computer, cell phone, PDA--you can now quickly retrieve all your scouting camera images and manage camera usage, all with a few keystrokes! The Smart Scouter is a self-contained digital game scouting camera that wirelessly sends trail photos via the cellular network. All you need is a Smart Scouter camera and a monthly wireless subscription from Smart Scouter, which allows you to manage your camera settings and get your photos from your own personal account. This system has a base monthly charge of \$14.99 and \$.04 per photo for average monthly charges of around \$20. (Accounts can be put into hibernation for \$7.99 a month) Stop disturbing your hunting area, and quit wasting your time and money traveling to check your trail photos. Pick your best hunting location for the season based on up-to-the-minute info. The Smart Scouter also works great for remote security applications. With a removable memory card (not included), you can also set up the camera traditionally and use it as a non-wireless scouting camera. And when you compare the costs of film and processing with traditional systems, travel to and from camera locations, and your time and trouble, the savings you get with the Smart Scouter really add up! Look to www.smartscouter.com for more This 1.3 MP digital scouting camera automatically sends its images to your account for instant wireless retrieval, anywhere in the world. (It also can be used with a removable CF memory card for traditional use. Card not included) With 3 Smart Passive Infrared motion sensors and 50 powerful infrared LED bulbs, the Smart Scouter takes quality photos at all times without spooking game, even at nighttime distances of 60'. Built-in laser pointing system for accurate setup. Easy-to-use control panel for quick and simple setup. Onboard 6V rechargeable battery (included). Features: Check your scouting game camera images anywhere you can see the internet Camera sends images through cellular network Removes necessity of walking through hunting area to get camera images Can set up as a traditional scouting game camera Save time and money 1.3 megapixel camera Three Smart Passive Infrared motion sensors 50 infrared LED bulb flash Built-in laser pointing system for setup Easy to use control panel Comes with 6V rechargeable battery. Go to their website and check out the smart scouter for yourself at www.smartscouter.com
